Monty's is asked for by name by Master Gardeners, Garden Clubs and avid gardeners everywhere! The natural science behind Monty's began over 25 years ago as champion rose grower, Monty Justice, was looking for a superior plant food. His original formula has grown into a line of quality products that are used by homeowners, commercial landscapers, and farmers across the country.

0.20% Chelated Zinc (Zn)	
Derived from Ammonium Hydroxide, Urea, Phosphoric Acid, Potassium Hydroxide, Boric Acid, and Zinc EDTA	

Information regarding the contents and levels of metals in this product is available on the internet at: <http://www.aapfco.org/metals.htm>

Monty's Fruit & Vegetable Plant Food can be used on all fruit and vegetable producing plants, from planting through production. When planting or transplanting, diluted product can serve as a starter fertilizer by applying to the soil after seeding (direct contact with seed is desirable and safe) or transplanting. Safe to apply on fruit and vegetable producing plants while fruit and vegetables are present.

Application Information: May be applied weekly, bi-weekly, or monthly depending on the desired results. May be applied to the soil with a watering can, soaker hose or drip irrigation. May be foliar applied (misting of leaves) with pump-up or hose-end siphon type sprayer. Spray in the early morning or evening when the threat of evaporation is diminished. Monty's is rainfast in 2 hours. Monty's Fruit & Vegetable Plant Food is a concentrated liquid plant food that should be diluted before using. Dilution rate is 1 ounce per 2-3 gallons of water. **Visit MyPlantVantage.com for more information.**

Warning: Some crops may be injured by application of Boron.
